

QWidget

```
classDiagram
    class QWidget
    class QGBAAssetView["QGBA::AssetView"]
    QGBAAssetView --|> QWidget
```

The diagram shows a class hierarchy. At the top is a box for 'QWidget' with two empty compartments below the name. Below it is a box for 'QGBA::AssetView' with three compartments: the top for the class name, the middle for private attributes, and the bottom for public methods. A blue arrow with an open triangle head points from the 'QGBA::AssetView' box up to the 'QWidget' box, indicating inheritance.

QGBA::AssetView

# m\_cacheSet  
- m\_controller  
- m\_updateTimer

+ AssetView()  
+ compositeTile()  
# resizeEvent()  
# showEvent()  
# updateTiles()  
# updateTiles()
